Testing Can Uncover Hidden Health Problems In Your Pet

Early detection. Reduced risk. Peace of mind.
We may screen for some of the following conditions in determining your pet’s health status.

**BLOOD**
CBC/Hematocrit are used to screen for:
- Anemia (low red blood cells)
- Inflammation
- Infection
- Stress
- Leukemia
- Bleeding problem
- Inability to fight infection
- Hydration status

**KIDNEY**
Blood and urine tests can indicate:
- Early renal disease
- Renal failure
- Infection
- Stones
- Cancer
- Abnormalities resulting from long-term medications

**PANCREAS**
Biochemistry tests can indicate:
- Pancreatitis (inflammation of the pancreas)
- Diabetes mellitus
- Abnormalities resulting from long-term medications
- Cancer

**LIVER**
Biochemistry tests can indicate:
- Liver disease
- Cushing’s syndrome
- Certain cancers
- Dehydration
- Obstruction of the bile ducts
- Abnormalities resulting from long-term medications

**TEETH**
Dental exams uncover mouth infections, which may cause secondary problems with vital organs.

**THYROID**
Biochemistry and serum T4 tests can indicate hypothyroidism or hyperthyroidism.

**HEART**
Immunassay tests can indicate heartworm disease. Biochemistry tests can indicate cardiac damage.

**DISEASES**
Diseases and conditions listed above represent some of the most common health issues afflicting small animals.
